Introduction

I am a Software Engineer with experience in the development and implementation of technological solutions for public and university institutions. I am interested in participating in projects that optimize processes and contribute through technology, using full-stack development tools, SQL databases, and systems analysis. I am characterized by my ability to learn, adapt, and work collaboratively.

Education

University of Tarapacá

Arica, Chile

Bachelor's Degree in Computer and Informatics Engineering

Skills

Technical: PHP, Laravel, MySQL, Node.js, JavaScript, CSS, HTML.

Languages: Spanish and English.

Experience

Ongoing Training in Backend Development

February 2025 – Present

Learning and practical application through personal projects, using PHP and Laravel, incorporating backend development best practices, REST API consumption, MySQL database management, implementation of data visualization using Google Charts, and use of Git for version control, with a focus on the continuous strengthening of technical skills.

Municipality of Camarones

Remote

Software Engineer

March 2024 – February 2025

Work was done on the development of a Laravel web platform where a record of invoices and supplies for the Codpa pharmacy is maintained, along with respective histories for subsequent monitoring to support decision-making based on the information provided by the reports."

University de Tarapacá "DICI"

Arica, Arica y Parinacota

Software Engineer

December 2023 – February 2024

Developed a Laravel-based web application to optimize the process of lending computers through a custom-built system.

University de Tarapacá "DLO"

Arica, Arica y Parinacota

Software Engineer

January 2023 – March 2023

Development of a website built with the Laravel framework for the more efficient lending of computers through a web system using QR codes, in order to reduce processing time.

Leadership

Qiri
Team Leader

Arica, Arica y Parinacota
May 2022 – June 2022

Selected as team leader among Civil Engineering in Computer Science and Informatics students to lead a multidisciplinary team composed of design and English students from the University of Tarapacá, along with three technology students from EPHEC University, Belgium. The project was carried out through online collaboration and focused on the development of a website (<https://qhapaqnan.qiri.cl/es/>) aimed at promoting the historical significance of the “Andean Road System,” known as *Qhapaq Ñan*.
